

LSI Floors and LEED

This information should be used for all LEED related projects on which you are bidding or for which your end user is seeking LEED certification, along with the required Material Safety Data Sheet (MSDS).

LSI Floors has been independently certified and complies with volatile organic compound emissions criteria of the State of California Section 01350. Therefore qualifying our flooring products for installation in schools and office building within the state of California.

LSI Floors also certifies that's its adhesive LSI300 is compliant with rule 1168 of the State of California's South Coast Air Quality Management District's Volatile Organic Compounds (VOC) limits. These limits are mandatory requirements set by the U.S. Green Building Councils, LEED programs Indoor Environmental Quality category. In addition to complying with the VOC limits, LSI300 also contains antimicrobial protection which helps inhibit the growth of various types of odor, stain causing mold, mildew and bacteria within its adhesive.

LSI Floors has had a long standing commitment to recycling and reuse of 100% of our pre-consumer waste. This pre-consumer along with post-consumer waste is recycled in our manufacturing process and can comprise of up to 10% to 20% of the total weight of the product. This will contribute to points in the Materials and Resources Category.

LSI Floors manufacturing facilities have historically streamlined their operational procedures to minimize wastage of materials, in order to truly maximize our ability to recycle and reuse our pre-consumer waste materials and incorporate post-consumer waste materials. Additionally, 100% of the raw materials utilized in the production of our product are regionally manufactured within 200 kilometers of our manufacturing facilities.
